OBJECTIVE

Creative and people-oriented Engineering student seeking an internship in the Software Engineering, or Computer Science fields.

EDUCATION

Texas A&M University **College Station, TX**

Bachelor's in computer engineering – C.S. Track ***May 2022***

- **GPA:** 3.492
- **Relevant Courses:** Data Structures and Algorithms (**C++, Java**), Intro to Computer Languages (**C++, Python**), Computer Architecture and Design (**C**), and Intro to Computer Systems (**C++**).
- **Awards:** Distinguished Student Awards (Fall 2020)

WORK EXPERIENCE

Texas A&M Electrical Engineering Graduate Office **College Station, TX**

Student Technician/Assistant *August 2020 - Present*

- Performed general clerical duties: filed, photocopied, and scanned various college forms or records for over 1000 graduate students.
- Utilized Microsoft Word and Excel to create, edit, and complete: supply forms, purchase order forms, and other graduate studies forms.
- Assisted and responded to upwards student/faculty inquiries in a professional, courteous, and timely manner.

SKILLS

Programming Languages: C++, Java, Python, and MATLAB.

Frameworks/Tools: Pandas, Matplotlib, Jupyter, Verilog, AWS, Linux.

Familiar With: R, HTML, CSS, Bootstrap.

COMPETITIONS

ConocoPhillips Innovation Challenge

1st Place *September 2020*

- Front-end application which uses a machine learning algorithm to predict the salinity of water using various parameters.
- Tech used: JavaScript, Bootstrap, Python, Kaggle, AWS, and KNIME.

Texas A&M Covid-19 Game Jam

9th Place (Project Lead) *April 2019*

- Developed a 2-d arcade game which highlighted the importance of social distancing. The player was put in a market and had to avoid other shoppers while collecting groceries.
- Tech used: Unreal Engine, and C++.

Texas A&M Howdy Hack

(Project Lead) *September 2020*

- Designed and deployed an application which uses Microsoft's Azure API to dictate the mood of a user's journal entry and recommends songs using the Genius API.
- Tech used: Python, Tkinter, Microsoft Azure Analytical API, and Genius API.

PERSONAL PROJECTS

Sorting Visualizer *June 2020*

- A GUI Application created to visualize how different sorting algorithms sort random arrays.
- Tech used: Python, and Tkinter.

Password Protected Pictures *August 2020*

- A Python script which encrypts and password protects pictures on computers.
- Tech used: Python, and Pickle.

ORGANIZATION

Developer Student Club *December 2020 - Present*

- Developing a full stack website for The Down Syndrome Association Organization. The website's goal is to allow communication between students, parents, and teachers.
- Tech used: Python, Flask, Oracle, GitHub, VSCode, HTML, CSS, and Bootstrap.
